

Dear BFG,

Thank you for your letter, it was wonderful to hear from you. After much investigation and research, we believe we have found the answer to your question.

Enclosed is a text explaining the basics of sound (which we hope will provide you with some useful background information) and our scientific conclusions are outlined below:

- We believe that you can hear sounds that other people can't because your ears work much like those of animals. *Explain what you mean*
- The size of your ears makes no difference to how well you can hear. You could have very small ears and still be able to hear sounds that others cannot.
- Scientifically, it is not possible for you to hear the stars singing as sound does not travel through a vacuum (an area where there are no particles) and Space is a vacuum. Therefore, we conclude that there must be something magical about your ears, which allows you to hear the songs of the stars.

Hopefully, this has been helpful and we have managed to answer your question fully. If you find yourself wondering about anything else, please do not hesitate to contact us.

We look forward to hearing from you again soon and, in the meantime, experiencing many more of your dreams.
